SUMMARY

Technical generalist with hands-on experience across enterprise software, AI-enabled products, and automation. Strong at breaking down ambiguous problems, translating business requirements into working solutions, investigating root causes, and collaborating across product and engineering stakeholders. Brings a builder mindset, rapid learning, and practical exposure to AI/ML, data, APIs, cloud technologies, and secure software development.

TECH STACK

Programming Languages: Java, Python, JavaScript, SQL

AI & Data: Generative AI, Prompt Engineering, Machine Learning, Data Processing

Development: React.js, React Native, FastAPI, REST APIs, PrimeFaces

Databases & Cloud: MySQL, MongoDB, AWS EC2/S3/IAM, Firebase

Tools: Git/GitHub, Postman, Linux, Ghidra, Wireshark, OWASP ZAP

Languages: English, Telugu, Tamil, Hindi

EXPERIENCE

Suki Software Solutions — Programmer Analyst Trainee

Mar 2026 – Aug 2026

- Build and enhance enterprise ERP modules using Java, PrimeFaces, and MySQL, translating business workflows and requirements into practical software solutions.
- Investigate application issues across backend logic, database queries, and system behavior; apply root-cause analysis to implement reliable fixes.
- Identify workflow and application gaps and propose practical improvements while balancing user needs, technical constraints, and delivery priorities.
- Collaborate in Agile sprints with engineering stakeholders to prioritize work, communicate progress, and deliver features and production fixes.

StayChat AI — Software Developer Intern

Nov 2025 – Apr 2026

- Built reusable React components and dashboards for an AI-powered customer-support platform, contributing to product workflows centered on customer communication.
- Integrated REST APIs across frontend and backend workflows, connecting product interfaces with AI-driven services and data flows.
- Translated functional and end-user requirements into maintainable product components while adapting to shifting startup priorities.
- Managed Git workflows and deployment activities, supporting reliable releases in a fast-moving product environment.

The Red Users — Cyber Security Intern

Feb 2025 – Mar 2025

- Automated repetitive malware-inspection workflows with Python, turning manual investigation into a repeatable analysis process.
- Analyzed network traffic with Wireshark and assessed web applications with OWASP ZAP; documented findings and practical recommendations.

PROJECTS

Health Oracle — AI-Driven Health Assistant

Dec 2025

- Built an AI-enabled application integrating wearable datasets, mobile workflows, and FastAPI services to deliver personalized, data-driven insights.
- Connected ML functionality to application workflows through REST APIs, working across product, backend, and data/AI components.

SecureInbox — Intelligent Email Authentication & Threat Detection Platform

Apr 2026

- Built a full-stack platform combining automated email-security analysis, structured data handling, and a user-facing dashboard.
- Implemented JWT authentication and role-based authorization across API workflows, emphasizing reliable and secure application behavior.

Malware Analysis Automation — Ghidra, Python, C++

Mar 2025

- Created custom scripts to automate repetitive binary-analysis tasks, improving the consistency and repeatability of malware investigation.

EDUCATION & ACTIVITIES

VIT Bhopal University — B.Tech, Computer Science Engineering (CGPA - 8.52)

Oct 2026

- Smart India Hackathon 2025 — Built and pitched an urban mobility solution with a multidisciplinary team under tight deadlines.
- National Cadet Corps (NCC) — Leadership, teamwork, discipline, and decision-making through structured training and camps.

Certifications: Oracle Gen AI Professional • Oracle Cloud Infrastructure Associate • Oracle Java Foundations Associate • IBM Cybersecurity Analyst
